A screenshot of the GitHub sign-up form. It features three input fields: 'Pick a username', 'Your email', and 'Create a password'. Below the password field is a tip: 'Tip: use at least one number and at least 7 characters.' At the bottom is a green button labeled 'Sign up for free'.

Commit references

Close issues easily with commit messages

Close and Reference with Commit Messages

Issues know all about commits. By using a few simple keywords you can close an issue right from a commit message, or just leave a note on the issue.

The syntax is basic: if you want to close issue #35, put `closes #35` somewhere in your commit message then push to GitHub.

Supported keywords: `close`, `closes`, `closed`, `fixes`, `fixed`

Leaving a note on an issues referencing your commit is even easier — just mention the issue number without using one of the above keywords, e.g. `This commit references #35`.

Anyone with **write access** to your repository may close an issue or leave a note.

Present on it!
